# Jazzmin

Welcome to Jazzmin, intended as a drop-in app to jazz up your django admin site, with plenty of things you can easily customise, including a built-in UI customizer

## Features

- Drop-in admin skin, all configuration optional
- Select2 drop-downs
- Bootstrap 4 & AdminLTE UI components
- Search bar for any given model admin
- Modal windows instead of popups
- Customisable side menu
- Customisable top menu
- Customisable user menu
- Responsive
- Customisable UI (via Live UI changes, or custom CSS/JS)
- Based on the latest [adminlte](#) + [bootstrap](#)

## Demo

Live demo <https://django-jazzmin.herokuapp.com/admin>

**Username:** test@test.com

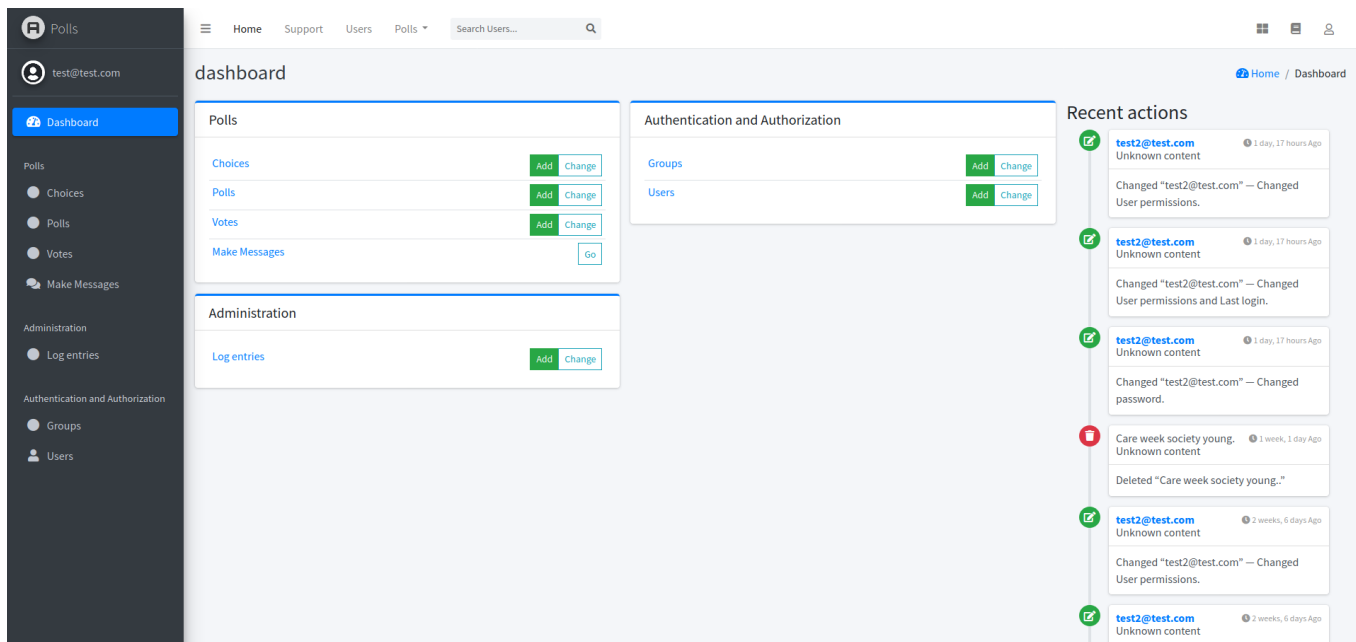

**Password:** test

*Note: Data resets nightly*

## Admin docs (if installed)

The screenshot shows the Django Jazzmin documentation page for template tags. The page has a dark sidebar on the left with a search bar and a list of tags: built-in tags, admin\_list, admin\_modify, admin\_urls, cache, i18n, jazzmin, l10n, log, static, and tz. The main content area is titled 'Template tag documentation' and lists several tags: autoescape, block, comment, csrf\_token, and cycle. The 'cycle' tag is highlighted, showing its description and usage examples. The examples are in a dark code block.

## Template tag documentation

Home / Documentation / Tags

### autoescape

Force autoescape behavior for this block.

### block

Define a block that can be overridden by child templates.

### comment

Ignore everything between {% comment %} and {% endcomment %}.

### csrf\_token

### cycle

Cycle among the given strings each time this tag is encountered.

Within a loop, cycles among the given strings each time through the loop:

```
{% for o in some_list %}
  <tr class="{% cycle 'row1' 'row2' %}">
    ...
  </tr>
{% endfor %}
```

Outside of a loop, give the values a unique name the first time you call it, then use that name each successive time through:

```
<tr class="{% cycle 'row1' 'row2' 'row3' as rowcolors %}">...</tr>
<tr class="{% cycle rowcolors %}">...</tr>
<tr class="{% cycle rowcolors %}">...</tr>
```

## Thanks

This was initially a Fork of <https://github.com/wuyue92tree/django-adminlte-ui> that we refactored so much we thought it deserved its own package, big thanks to @wuyue92tree for all of his initial hard work, we are still patching into that project were possible, but this project is taking a slightly different direction.

- Based on AdminLTE 3: <https://adminlte.io/>
- Using Bootstrap 4: <https://getbootstrap.com/>
- Using Font Awesome 5: <https://fontawesome.com/>
